SUBFLOOR LOWERING KIT

HBFJLK by

Subfloor Lowering Kit Includes:

- 15 Joist Brackets
- 6 Wall Brackets
- 81 Wood Screws
- 36 Joist Hanger Nails

Max Bracket Spacing 36" OC
2x4's, subflooring & subfloor
adhesive not included

- Quickly lower your subfloor for a low profile, curbless ADA, or barrier free shower**
- One kit recesses up to 24 sq ft
 - Perfect for I-Joists or dimensional lumber because brackets attach to the top chord of joists and studs at parallel walls
 - Wall brackets can be modified for different situations
 - Achieves L/360 or better deflection rating with a live load of 40 PSF and dead load of 20 PSF

15 JOIST BRACKETS

Install with Included
1-5/8" Wood Screws

6 WALL BRACKETS

Install with Included
1-1/2" Wood Screws

Installation

1. Remove subfloor to walls and joists as needed. Sub-floor should not overhang the joist bay or be left unsupported.
2. Install joist and wall brackets. Brackets should be spaced a maximum of 36" on center to achieve L/360 with a live load of 40PSF and a dead load of 20PSF. Structural grade #2 or better douglas fir, larch or pine.
 - Use screws to attach joist brackets and joist hanger nails to attach wall brackets
 - Wall brackets can be bent onsite if needed (nail to subfloor or bottom plate then use hammer to bend the bracket down). Notches on wall bracket represent top and bottom of subfloor (see fig. 1).
3. Create 2x4 frame as shown and place frame into hangers. Best practice recommends subfloor adhesive and screws at hanger seats.
4. Install subfloor to 2x4 frame with adhesive and screws.

IN-SIGHT - LINE DRAIN TILE TRIM KITS

HBINSI12 (1/2"), HBINSI38 (3/8"), HBINSI14 (1/4")

In-Sight Trim gives the upon of having a metal finished edge along the length of the line drain gap
****Trim kit is required and mandatoiy when drain is located at the shower entry threshold****

In-Sight Trim Kit Includes:

- 2 pcs In-Sight trim 35 3/4" length
- Metal cut-off wheel
- Temporary gap spacer/alignment sticks

Trim pieces are made from high quality 304 Stainless Steel .25mm thick

A. Install Hydro-Blok line drain, shower pan and wallboard per typical specs. Use included cut-off wheel to cut trim to length as needed.
 B. On shower/wet side of drain gap use thinset along entire length of drain to bond trim piece to drain body. Firmly press trim into thinset and position in place. Remove any excess thinset from drain slot if necessary.
 C. On dry side of drain gap run a continuous bead of Hydro-Blok sealant along the entire length of drain to bond trim piece to drain body. Firmly press trim piece into sealant bead and adjust into position. Trim pieces should run the entire length of line drain.
 D. Before thinset & sealant sets up, insert supplied plastic spacer sticks into gap between the trim pieces. This will properly space the trim pieces and hold them in position while thinset and sealant cures. Leave this temporary spacer in place while tiling to keep debris out of drain slot. Remove plastic gap spacer sticks before putting shower into use.

**** PLEASE NOTE: When cutting trim to desired length it is best practice to place all cut edges at the outer ends of line drain. This will allow factory edges to be butted together when using multiple trim pieces.**

IN-SHADOW - LINE DRAIN TILE TRIM KITS

HBINSHADOW

In-Shadow Trim allows line drain slot to be concealed under the vertical wall tile

In-Shadow Trim Kit Includes:

- 2 pcs In-Shadow trim 35 3/4" length
- Metal cut-off wheel
- Temporary foam backer rod

Trim pieces are made from high quality 304 Stainless Steel .25mm thick

A. Install Hydro-Blok line drain, shower pan and wallboard per typical specs. Use included cut-off wheel to cut trim to length as needed.

B. Run a heavy continuous bead of Hydro-Blok sealant along the wallboard face that will receive the In-Shadow trim. Firmly press trim piece into sealant bead and adjust into final position before sealant sets up. Trim pieces should run the entire length of line drain.

C. Insert supplied round foam backer rod into drain slot. This is temporary and will keep debris out of drain slot during tiling.

D. Apply thinset over face of trim and onto wallboard for setting tile. Bottom edge of tile should rest on horizontal lip of trim piece. Do not use sealant on this boom edge of tile. This will allow for any water to weep under tile and down the drain if necessary.

**** PLEASE NOTE: In-Shadow trim can be used with 1/4" - 3/8" shower pan tile. When cutting trim to desired length it is best practice to place all cut edges at the outer ends of line drain. This will allow factory edges to be butted together when using multiple trim pieces.**

LINE DRAIN SLOT EXTENDER

HBLDSLOTEXT

The Ebbe Line Drain Slot Extender is used to extend the surface le drainage gap up to 12" on one or both ends of the line drain. See note # 3 below for important placement info.

Notes:

1. Installation to be completed in accordance with manufacturer specifications.
2. Maximum length of un-cut line drain is 73 3/8"
3. The gap at the slot extender will only be as deep as the tile thickness. To avoid potential spillage over the gap extension it is recommended to use the Slot Extender only in areas that will get minimal water exposure during normal use. If this is not possible, a line drain coupler with 2 line drains is advised for effective drainage.

LINE DRAIN COUPLER

HBLDCOUP

The Ebbe Line Drain Coupler allows for multiple Ebbe E6100 line drains to be joined together when required for continuous lengths over 73 3/8"

*See notes 3 & 4 below for important details to be aware of .

Notes:

1. Installation to be completed in accordance with manufacturer specifications.
2. Maximum length of un-cut line drain is 73 3/8"
3. Be aware that joining multiple line drains together will require a separate waste pipe connection for each line drain.
4. ****Important: Coupler joint location must be centered between the 2 line drain waste pipe connections for proper drainage.**
